

## HOMEOPATHIC IMMUNIZATION SCHEDULE

<u>Disease</u>	<u>Immunization</u>
Diphtheria *	Diptherinum
Pertussis*	Pertussin
Polio	Lathyrus sativa
Rubella *	Rubeola
Mumps *	Parotidinum
Tuberculosis	Tuberculinum
Influenza	Influenzinum
Small Pox/Chicken pox *	Variolinum
Anthrax	Anthrocy anum
Measles *	Morbillinum
Botulism	Botulinum
Tetanus	Ledum
Pneumonia	Pneumococcinum
Rabies	Lyssin
Streptococcus	Streptococcinum
Syphilis	Syphillinum

### **Protocol:**

1. Begin at age 6 months during an illness free period. Try to be consistent by administering the vaccinations at the same time each year, i.e fall or spring etc..
2. Administer the remedy 1X per day for 2 days, then wait an additional 5 days before administering the next nosode. This allows for you to observe for a reaction, and if one is seen, wait an additional week before administering the next medicine.
3. During the administration of the homeopathic vaccinations, supplement with extra Vitamin C and thymus extract.
4. Repeat the series each year at the same time until the child is 12 years old.
5. If the child is exposed to one of the diseases, administer a dose of the corresponding nosode to re-stimulate the immune system. Additional homeopathic medicines may also be utilized following exposure.
6. Consider administering tetanus toxoid as well as this covers the toxin exposure while the Ledum covers the puncture wound.
7. As Polio is obtained by the oral route, PO administration of the vaccine usually does not cause problems except for immuno-compromised patients.
